RE: *Oil Level Identification - LP Series Pumps*

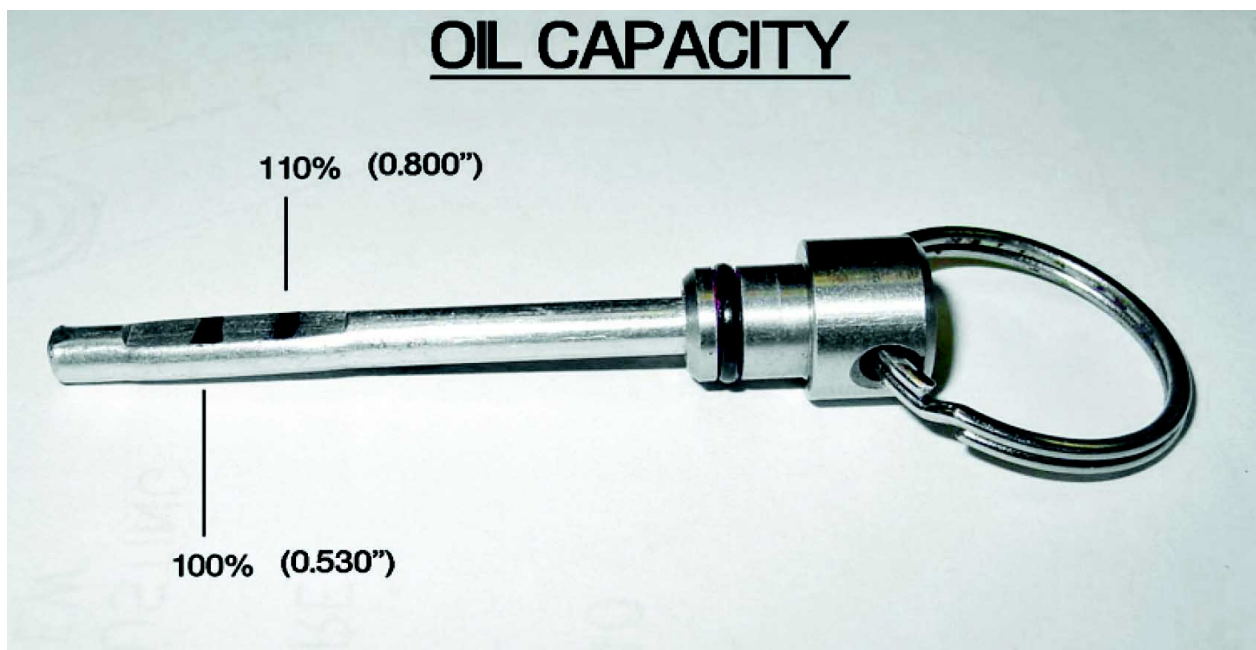

Below is a picture of an oil dipstick from a LP series pump gear end. This picture is intended to show the approximate oil level when 100% and 110% oil capacity is utilized. The measurements were taken from the end of the dipstick, nearest to the notch. Both of these oil levels fall within the "notch", which is located near the bottom of the dipstick. Extra oil is needed when the pump is run opposite the required direction.

If there are any questions or concerns regarding this information please feel free to contact your Giant Sales Representative at 1-800-633-4565.

Sincerely,

Daniel Losek
