RE: P54-P59 Mounting Bolt Kit

Introduction: The normal rail for the P54-P59 pumps is the 01075-rail set, this rail when sold with this family of pumps is also sold with the 01067 mounting bolt kit. Back in 2018 we updated the rail thickness and the bolt included in the 01067 mounting bolt kit (01067-1) is not long enough to allow for the proper thread engagement when used with this rail.

Corrective Action: Mounting bolt kit 01123 has been created to be used in place of 01067 for the P54-P59 pumps. The bolt included in this kit (01122) is 5mm longer and allows the rails to mount to the pump with the proper thread engagement. Please let engineering know if you have any questions.
