RE: Anti Seize for Hollow Shaft Pumps

Giant supplies multiple hollow shaft pumps, particularly hydraulically driving pumps. When using this style of pump, the shafts tend to seize together over time. This makes it difficult to disassemble the pump and motor.

Giant will now supply a packet of Anti-Seize with each of these pumps. The packet of Anti-Seize can be found in the bag which contains the manual of the pump. This is to be applied to the shaft of the pump and it will help with the disassembly and help prevent the shafts from seizing together.
